

Cosmetics Offers

Cosmetics at the Parkhotel Igls complement the harmony of the Modern Mayr Programme and support the purification and regeneration process. You will profit from the cosmetics methods and our personal recommendations. We will be pleased to advise you.

AKARI – for a vivacious life

The Austrian company AKARI stands for a unique, holistic cosmetics line. Only the purest natural ingredients are used, without chemicals.

AKARI is a Japanese word meaning 'light' and 'radiance'. That is the AKARI philosophy for life. Think of the light that on really good days radiates from you, empowering you with your irresistible smile. This radiance is natural beauty, which comes from within.

AKARI offers various treatments with body colour, vacuum purification, individual aromas and flower essences. These active agents motivate the body to purify itself more quickly, regenerating and radiating.

The effects are noticeable on three levels: body, soul and mind

AKARI products impact the body through colour and human touch. The product base consists of cold-pressed oils of the highest biological quality – jojoba oil, almond oil, avocado oil, shea butter and lanolin. The spiritual side involves the essences of flowers and minerals, which can be individually introduced during treatments and integrated into all cosmetic products. The third aspect is that of the mind, through the use of pure, ethereal oils from India. These aromas promote the 'sharing of kindness and affection' between your temperament, your ego and your intellect.

Cosmetics Offers

REVIDERM – microdermabrasion

The REVIDERM Skintelligence System stands for intelligent skin care. Through a skin diagnosis, using innovative analytical methods, optimal treatment and care of the highest standard is ensured.

Dermo-cosmetic treatments

Controlled microdermabrasion is a treatment method for regeneration and rejuvenation of the skin, with effects evident already after the first treatment. A sign of aging is the decelerated division of cells and swelling, such as dryness of the outer layer, which leads to the development of wrinkles. To counterbalance these effects, it is important to undergo a peeling of the top layers of skin, which stimulates the cells. Microdermabrasion using a skin peeler contains fine crystals to gently remove the hard upper cells of the skin. In contrast to a classic peeling, this method dictates more precisely where and how much skin is to be removed. It provides stimulation and energy to developing skin cells to generate young, fresh cells. In the second phase of treatment, the active agents really take effect, regenerating the skin from within for long-lasting results. Your skin will be more resilient, balanced and smooth.

Dermo-cosmetic home care

As we grow older, some processes lose their effectiveness more rapidly than others – such as the intake of oxygen, cellular nutrition or cell production. These developments are symptoms of old age. REVIDERM does not focus on symptoms, but on causes. To combat the causes, a nine-stage programme has been developed for home care. Consistent use of this product will extend the effects of dermo-cosmetic treatments.

Cosmetics Offers

KLAPP Cosmetics

What your skin needs changes according to how you live, your age, the climate and season. KLAPP Cosmetics has developed optimal skin-care techniques for the current state of your skin, and for every skin type.

JESSICA natural nails

What kind of nails do you have? Just as every individual has different hair and skin, nails too are just as unique. Through a nail consultation, nail-care products will be individually selected for you, which will then be used during a manicure. With proper care, you can have life-long natural, healthy nails.

Medical foot treatment

Highly trained staff provide treatment for your feet and nails, against problems such as pressure points, corns, cracks, warts, nail fungus, ingrown nails, etc. The medical treatment helps to prevent foot disease and can assist in healing.

TELEANGITRON® methods

This is a gentle method for the simple and scar-free removal of red veins, red spots on the face (especially the cheeks and nose) and permanent hair removal for the face (also possible for white and blond hair). An electrolyte galvanic current forms a gentle leaching solution from the salts and fluid of the tissues and veins. A time-controlled radio-frequency is established to convert this liquid into an intensive alkaline fluid, which enables it to selectively destroy the vascular structure. Permanent hair removal works according to the same principle. It is simple, scar-free, clean and lasting.

Detailed information about offers, treatments and prices can be found in our 'prices' section.

Facial REVIDERM Dermo-Cosmetics

The new generation of medical cosmetics

Targeted microdermabrasion is a professional peeling treatment that is a re-quirement for effective skin rejuvenation. An effective circulation of the deeper layers is encouraged through the gentle removal of the rough upper cell layers. The skin is stimulated to produce new cells, which drift slowly to the skin's surface and gradually displace old cells. Your skin remains radiant for weeks, and your daily beauty products penetrate much better into the fresh, new skin.

REVIDERM microdermabrasion provides rapid, visible and long-lasting regeneration of the skin from the inside out.

– <i>REVIDERM microdermabrasion classic</i>	120.00

Body cellulite – purification

Vacuum drainage removes excess tissue precisely in those zones where fatty deposits have accumulated, producing unsightly bulges. The combination of colour therapy is effective due to the oscillating current – from purifying orange, firming blue and draining-off purple, depending on the colour filter used.

Purification fourfold programme 300.00

4 x body colour vacuum treatment
1 x ear candle treatment or paraffin pack
